

MGH BioSkills -149-4 Lab Fit Out

OVERVIEW

- **Project:** Lab Fit Out
- **Architect:** Linea 5
- **GC:** F.L. Caulfield
- **Location:** Charlestown, Massachusetts

In this new lab for MGH Bioskills

Wood Veneer Casework

Stainless Steel Casework

Epoxy Worktops

Stainless Steel Worktops

Pro Series Fume Hoods

Epoxy Pegboards

Mass General Hospital has unveiled its latest renovation; the BioSkills Lab in Building 149, situated at the Charlestown Navy Yard campus. This renovation represents a key milestone in Mass General's broader initiative to create state-of-the-art laboratory and clinical research examination facilities. The lab's design ensures an ideal environment for innovative research. Rift-cut red oak fixed storage cabinets with black epoxy tops provide a complete work area ready to handle scientific challenges. Stainless steel lab casework with stainless steel tops is utilized in areas requiring constant sterilization. Pro Series Fume hoods provide a secure environment for researchers handling hazardous chemicals. Plenty of wall-mounted adjustable shelving ensures lab supplies can be neatly organized, and fully welded and powdercoated floor-mounted cylinder racks safely store large specialty gas bottles. The design of the lab further establishes Mass General as a leader in integrated healthcare systems.
